2022 ISSA Fellows Program

The nomination cycle for the 2022 ISSA Fellows program is currently open. The program includes Senior member, Fellow and Distinguished Fellow. Further details regarding the program, including requirements for each designation are available at https://www.issa.org/fellows-program/?utm_source=WordPress&utm_medium=Organic&utm_campaign=Informz.

The chapter board highly encourages all members meeting the Senior member requirements to consider applying for this designation. All interested members can contact our VP of Membership, Steve Chan at stephan.chan@occ.treas.gov who can provide the requisite nomination.

While Senior status is not necessarily required to acquire Fellow or Distinguished Fellow status, it does serve as a natural progression to either Fellow designation. If any members believe they meet the requirements for Fellow or Distinguished Fellow and are interested in applying for either, please reach out to Bill Smith at president@issa-centralmd.org and Steve Chan at stephan.chan@occ.treas.gov, both of whom are Distinguished Fellows and could assist with any questions and potentially serve as a nominator.

The window to be recognized within the 2022 Fellows Cycle will be closed on May 8th, 2022, at 11:59 PM (UTC).

Free High School Cybersecurity Workshop

Charles Frick, a Principal Staff Member at Johns Hopkins Applied Physics Laboratory, helps run a 2-week hands-on cybersecurity workshop for high school students onsite at APL. The workshop is free, but registrations are limited and require a formal application process. If you have and/or know of a high school student with an interest in cyber security, consider this workshop. Charles has been helping run this workshop for several years and has done an outstanding job.

Registration deadline: February 28, 2022.

Ira Winkler

Chief Security Architect for Walmart InfoSec

Ira Winkler, CISSP is Chief Security Architect for Walmart and author of You Can Stop Stupid. He is considered one of the world's most influential security professionals and has been named a "Modern Day James Bond" by the media. He did this by performing espionage simulations, where he physically and technically "broke into" some of the largest companies in the World, investigating crimes against them and telling them how to cost effectively protect their information and computer infrastructure. He continues to perform these espionage simulations, as well as assisting organizations in developing cost effective security programs. Ira also won the Hall of Fame award from the Information Systems Security Association, as well as several other prestigious industry awards. CSO Magazine named Ira a CSO Compass Award winner as The Awareness Crusader. Most recently, Ira was named 2021 Top Cybersecurity Leader by Security Magazine.

Human Security Engineering: Stop Relying on the Failed Human Firewall

While the main perception is that the “user problem” is due to a malicious party trying to trick well intentioned users, users who are unaware, apathetic, careless, etc., are more likely to be the cause of loss. Either way, the cybersecurity industry realizes this and develops tactics such as awareness, MFA, DLP, etc. to mitigate the problem. Despite all of these tactics, 90%+ of all losses result from attacks targeting users. What this talk proposes is a comprehensive strategy to address the insider threat, whether it results from malicious or well-meaning insiders.

Stephanie Neely, Defense Information Systems Agency

Stephanie Neely has 27 years of experience in cybersecurity and cyber operations. She has worked both sides of the fence as an ISSM to NOCs and SOCs. Currently she leads a team to ensure the Department of Defense Information Networks (DODIN) are postured through unified actions that deliver the successful evolution of modernized technology solutions. Currently we are working on defining zero trust minimum capability standards for the DODIN and will be performing risk assessments against each DAO's architecture.

Emerging Technologies, Existing Policies and Architectures

This presentation we will discuss current architectures and policies and how it's hard to match the speed of change. That the coalition of the willing can create change through sharing and leveraging the grassroots of organizations and drive-up consistencies in leveraging what you have to meet new constructs and open a discussion on what policies are required.
