Officer Elections November 2016

President – Bill Smith, Jr.

VP Education – Chuck Dickert

VP Outreach - Open

VP Membership – Steve Chan

Election Committee:

Renee Esposito: renee_espos@hotmail.com

Jason Bergener: jason@bergener.com

CISSP Study Group

Start: January 2017

Review and Practice Exam

12 Sessions Total

2017 October 10-11, 2017 San Diego, California

2018 October 16-17, 2018 Atlanta, Georgia

2016 IEEE 3rd World Forum on Internet of Things (WF-IoT) – IoT: Smart Innovation for Vibrant Ecosystems

IEEE World Forum on Internet of Things
12-14 DECEMBER 2016 // RESTON, VA, USA

Innovating Forward Together -Technology Passion, Purpose, and

Pride

Learn, Lead, Succeed

Dove-tailing with this year's World Forum Interpret of Things conference theme, IoT: Smart Innovation for Vibrant Ecosystems, this entertaining, enlightening, and enjoyable set of discussions focuses on how IoT technologies enable creativity, collaboration, and culture shifts.

ISSA 2016 Meetings and Events

Date	Speaker	Organization	Topic
November 16, 2016	Don Woodard	Attivo Networks	Cyber Attack Detection and Defense
December 21, 2016	Joe Mignano Jeanie Saunders	Logical Operations	Successfully Empowering Employees in Security Awareness
January	Charles Sirois	Assurance Data, Inc.	The DNA of Data Theft
February 22, 2017	Vendor Expo		
April 26, 2017	Charles Sirois	Assurance Data, Inc.	

December 21, 2016 Speaker Joe Mignano, VP, Channels Jeanie Saunders, Director, Trainer Enablement Logical Operations

Joe Mignano leads the Channels group at Logical Operations. In this role, Joe is responsible for setting Logical Operations' certification development strategy (which includes certifications in IT Security, secure mobile application development, vendor-neutral cloud computing, and virtualization), initiating public relations and other awareness efforts relative to Logical Operations' certification products, and building partnerships aimed at developing a broader channel for Logical Operations' certification products worldwide.

Jeanie Saunders is a Logical Operations Instructor with over 15 years of classroom experience. She is certified by Microsoft, CompTIA, and Epic, and has taught classes on Microsoft Office, Network Operating Systems, Healthcare software and Trainer Development. In her current role, she meets with trainers to share ideas and tackle the tough questions relating to the management of today's computer training classroom using resources that help create the best possible learning environment for students.

December 21, 2016 Topic Successfully Empowering Employees in Security Awareness

It's a well-known statistic that the majority of cyber security incidents originate from end users within an organization. The emails they click through, their treatment of mobile devices with access to corporate data, and the general lack of awareness or empowerment they feel relative to understanding IT security risks leave most organizations operating as though the front door to the building has been left open – it's become increasingly common for outsiders to gain easy access to corporate data, practically in broad daylight.

To better combat IT security challenges, Logical Operations has authored an expert-facilitated training course and accompanying credential that helps an organization not only implement a successful security awareness program, but build a process for ensuring their employees feel continuously empowered relative to IT security and their role in ensuring corporate data is left uncompromised. In this presentation, Logical Operations will talk through their recommendations for successfully implementing such a program, as well as the actions they've seen corporate clients take to better avoid data compromises

November 16, 2016 Speaker Don Woodard Security Architect, Attivo Networks

Don Woodard is a versatile technical professional with over 20 years of experience working with market leading security companies and solid achievements in designing and implementing secure Internet-based solutions.

Don joined Attivo Networks as the Senior Sales Engineer responsible for US Federal business development. Don joined the company because he believes the traditional way of securing important assets and information is broken. The power of Deception is a unique solution to the new push to gain full visibility into all network activity. He focuses on the idea that CISO's are in need of new approaches to fix the broken n architectures in place today.

He began his career in Information Technology in 1990, transitioning into Network Security as a Senior Security Engineer at Guidance Software, AccessData, NetWitness, and RSA. Don sold to and managed some of the largest agencies within the Federal Civilian Government throughout his career.

November 16, 2016 Topic Cyber Attack Detection and Defense

Prevention, detection, and response are the core pillars for any company's cybersecurity infrastructure. Always prevent what you can, but also have a solid plan for the real-time detection of an inside-the-network attacker and have the tools in place for post-compromise investigations and remediation. Deception is quickly becoming recognized as the most effective and efficient approach to detecting targeted, stolen credential, and ransomware attacks. Deception lures an attacker into revealing themselves and completes extensive attack analysis, which can be used to improve incident response by automatically blocking and quarantining an attacker. In this session you will learn how deception technologies accelerate time-to-detection, how attack analysis can be applied to expedite response actions, and how threat intelligence can be leveraged to strengthen prevention security systems.
