ISSA 2017-2018 Meetings and Events

| Date | Speaker | Organization | Topic |
|--------------------|------------------|--|--|
| June 27,2018 | Jim Stevens | Deterministic Securit y, LLC | REnigma: A Tool to Analyze Malware |
| July 25, 2018 | Michael Doyle | Baltimore Cyber Range | |
| August 22, 2018 | | Aruba, the HP Enterprise Company | |
| September 26, 2018 | Conrad Fernandes | Johns Hopkins - Applied Physics Laboratory (APL) | Security logging and central monitoring of AWS GovCloud accounts |

July 25, 2018 Speaker

Michael Doyle Baltimore Cyber Range

As co-founder and President of Baltimore Cyber Range (BCR), Michael Doyle is responsible for contributing to all technical aspects of the company's activities. His technical and operational experience covers more than four decades including RF systems, computer / network technology, software, hardware and data processing. He has also performed concept development and modeling for networks, antenna systems, sensor systems, and satellite communications systems. Mr. Doyle continues to participate as a senior technical consultant for Sterling Technologies Group (STG), a technology consulting firm in northern Virginia. Before founding STG he served as a staff, senior scientist employed by the US Government where he participated in both small and very large SIGINT, MASINT and Computer / Network security programs over a 27-year career. Mr. Doyle holds degrees in Computer Science and Mathematics.

June 27, 2018 Speaker

Jim Stevens Deterministic Security, LLC

Jim Stevens is a co-founder of Deterministic Security, LLC. He was previously employed at the Johns Hopkins University Applied Physics Laboratory (JHU/APL). At JHU/APL, Jim co-lead the Malware Laboratory, co-lead the REnigma project, and invented Guard Lines, a patented CPU-based technology designed to prevent memory corruption exploits in real time. He holds a B.S. in Computer Engineering from the University of Kansas, an M.S. in Computer Science from the University of Arkansas-Fayetteville, and is a Ph.D. candidate in Computer Science at the University of Maryland-College Park.

June 27, 2018 **REnigma: A Tool to Analyze Malware**

REnigma is an advanced semi-automated malware analysis tool designed to give enterprise network defenders a safe, effective, and efficient environment to manually execute and inspect malware behavior. Originally developed at the Johns Hopkins University Applied Physics Laboratory (JHU/APL) with funding from the United States Government, REnigma uses advanced Virtual Machine Record and Replay technology to capture everything that happens inside of a virtual machine at nearly full speed and perfectly replay execution down to the instruction level. With this capability, analysts can easily capture second stages, defeat advanced packers, extract IOCs from memory, and much more. This talk will cover how REnigma works, how REnigma is deployed within an enterprise environment, and give a demonstration of REnigma analyzing malware.
