Please respect the speakers and other members,

Silence or turn off cell phones and electronic devices,

No video or audio recordings.

Questions are welcome; please keep them on-topic and brief. Further discussion should be taken off-line with the presenters so as to allow them the courtesy of being able to finish their presentations within the allotted time without being rushed.

Sidebar discussions should be constrained. If you must discuss something, allow your fellow members (and the presenter) the courtesy of doing so outside or on break.

Zscaler services enable customers to move securely to a modern cloud architecture. The Zscaler cloud connects users to applications, regardless of where users connect or where the applications are hosted, while providing comprehensive security and a fast user experience.

Zscaler offers two service suites that eliminate the cost and complexity of gateway appliances. Zscaler Internet Access securely connects users to internet and SaaS applications, scanning every byte of traffic to protect against cyber threats and data leakage. Zscaler Private Access provides fast access to internal applications hosted in the data center or public clouds—without the need for a VPN.

ISSA Member Benefits

<https://www.issa.org/page/SpecialOffers>

Some pretty big corporations and law enforcement agencies rely on us. You should too. Don't pay for someone else's overhead and advertising costs. Pay for quality training.

We only do one thing at CyberSecurity Academy. Instruct professionals to develop their skills as digital forensic examiners and information security professionals.

We don't offer dozens of courses, we offer a few that we are really good at, such as the Certified Ethical Hacker (CEH), Digital Forensic Examiner, and Certified Information Systems Security Professional (CISSP). Your instructors are not only professional trainers, but digital forensic and information security professionals who perform incident response and process digital forensic cases on a regular basis.

CyberSecurity Academy is offering the following discounts to ISSA Members on all training course offerings:

\$100 USD off the price of any course over \$800 USD

\$200 USD off the price of any course over \$1500 USD

Visit www.cybersecurityacademy.com for details. Mention you are an ISSA Member when you enroll to receive the discount.

The discounts on this page have not been subjected to any testing by the Information System Security Association (ISSA). These offers are made by third parties and not endorsed by ISSA. Members should thoroughly review the details, privacy policies, and information provided by these vendors prior to selection or implementation.

No Network Needed?!?!

It seems every day, we are bombarded with news of yet another breach and our personal information being traded and sold on the dark web/Internet. We lose sleep wondering if we have the right controls and policies in place to prevent our companies and our names from appearing in the next morning's headlines. Is it time for a different approach? What if we could get rid of our network so we no longer had to define complex boundaries and policies? Is it really possible to architect a system that removes all the traditional ingress and egress points? If we resign ourselves to the fact that it's not IF but WHEN our network gets breached....then why do we still have a network?
