Board of Directors

- ❖ President - Bill Smith, Jr., CISSP, GSNA, CEH, GPEN, GCFA, GCFE
- ❖ VP Operations - Sidney Spunt, CISSP
- ❖ Secretary - Lorenzo Thweatt, CISSP
- ❖ VP Outreach - Bill Zook
- ❖ VP Education - Kevin Newman, CISSP
- ❖ Treasurer - Seth Wilson, MBA, CISA, CISSP
- ❖ VP Membership - Stephan Chan, CISSP, PMP
- ❖ VP Professional Development - Melissa Lachance, CISSP

Volunteer to Assist VP of Outreach

- The board is seeking a volunteer to assist Bill Zook, our VP of Outreach. Areas of focus include engaging with our current sponsors to ensure they are leveraging benefits of their sponsorship, following up with them close to renewal and interacting with potential new sponsors

Financial Audit

Thanks to Renee Esposito for completing the financial audit of our records and leading our annual Board of Directors elections. Thanks

CISSP Study Group

Norseman Defense Technologies | 10981 Guilford Rd | Annapolis Junction, MD 20701

Each Tuesday at 5:00 PM -8:00 PM (EST), September 01, 2026 - December 08, 2026 (skips 3 Nov 26)

Why attend?

Gain credibility as a security expert.

Become a more marketable/hirable candidate.

Become/remain contractually compliant (DoD 8570.01 Manual / DoDD 8140)

Improve IT security skills and enhancing productivity.

Save money over “boot camp” style courses.

Our Study Group fosters a learning environment to better absorb and understand the material.

Our approach simply makes the information more useful and easier to interpret!

You can attend each session in-person in Annapolis Junction MD, or attend virtually on line. Your choice.

Meals are included each night for in-person sessions

Bonus: Pass your exam within 6 months; get a free year of ISSA membership on us!

Cost: just **\$450**

Jared Sladich, Senior Solutions Engineer, CodeHunter

Jared Sladich is a cybersecurity expert with deep specialization in automated malware analysis, threat visibility, and technology integration. He works at the intersection of technical depth and practical application, helping security teams move beyond the limitations of manual reverse engineering to identify and understand advanced threats faster.

His expertise was built over a career spanning the Department of Defense, Intelligence Community, and the commercial cybersecurity industry. He began as a Human Intelligence Collector in the United States Army, then branched out into digital forensics and cyber threat intelligence work before progressing into senior technical roles where he built various data analysis and email security products. That foundation in intelligence collection and forensics continues to shape how he approaches malware analysis and threat intelligence today. Across each of these roles, Jared has honed a rare combination of skills: the analytical rigor of intelligence tradecraft paired with hands-on technical fluency in modern threat analysis.

That same hands-on expertise carries into every conversation where he shares it regularly with SOC and MSSP audiences at industry events like Black Hat USA, Pax8 Beyond, and regional Cybersecurity Summits.

Behaviors as Artifacts

Cybersecurity has traditionally treated software as something to be identified. Hashes, file names, extensions, certificates, and other metadata have become the artifacts we collect, store, and reason about. While these attributes are valuable, they answer only one question: What is this? They tell us very little about what it does.

The same is true when describing a person. We can list their height, hair color, occupation, or where they live, but those characteristics don't tell us who they really are. Identity is ultimately expressed through behavior: how someone thinks, acts, adapts, and responds to the world around them.

Software is no different.

Every application, script, or binary exhibits a unique set of behaviors that can be derived through static analysis, dynamic execution, or both. Those behaviors extend beyond the concept of a traditional fingerprint. They become behavioral artifacts that capture intent, capability, and function rather than simply appearance.

Jacob Bardin

Jacob has over 25 years of cyber security experience, and has worked extensively with both Federal and Commercial customers. Prior to joining Bonfy.ai Jacob was with AuthMind (Identity Security) and before that AppOmni (SaaS Security). Jacob has also worked for Demisto (Security Automation, acquired by Palo Alto Networks) and was Federal lead for SonicWALL Security. In his time Jacob enjoys reading, hiking, biking, and running with the occasional round of golf. He is married with three grown children, all of whom still seem to like him!

From Legacy DLP to AI-Native Data Security: Protecting Data in the Age of Copilots and Agents

AI is transforming how sensitive data moves, not just where it is stored. Instead of static documents at rest, organizations now face a world of dynamic, AI-driven content where data is continuously generated, summarized, and shared by copilots and agents. In this talk, we explore the core principles of AI-native data security, why legacy DLP and perimeter controls are insufficient, and how to rethink protection around unstructured content, real-time context, and data-in-use. Attendees will gain an actionable framework for governing AI adoption while maintaining trust, privacy, and regulatory compliance.
